F-150® Lightning® Truck:

Scheduling Preconditioning

For Drivers

Overview

Preconditioning is a way to prepare your electric vehicle for departure while it is still plugged into a charger. By using power from the charger to warm or cool the battery and cabin, preconditioning can **help preserve battery power** for your drive.

Effectiveness of cabin conditioning may be reduced by extreme outside temperatures.
Preconditioning will be limited by the amount of power available from the charger.

Why Precondition Your Electric Vehicle?

- Before you head out on the road, it's important to prepare your F-150® Lightning® for departure. That's where preconditioning steps in – it **helps warm or cool the cabin and battery**, especially on extremely hot or cold days, and **helps preserve range and battery power**.

Effectiveness of cabin conditioning may be reduced by extreme outside temperatures.
Preconditioning will be limited by the amount of power available from the charger.

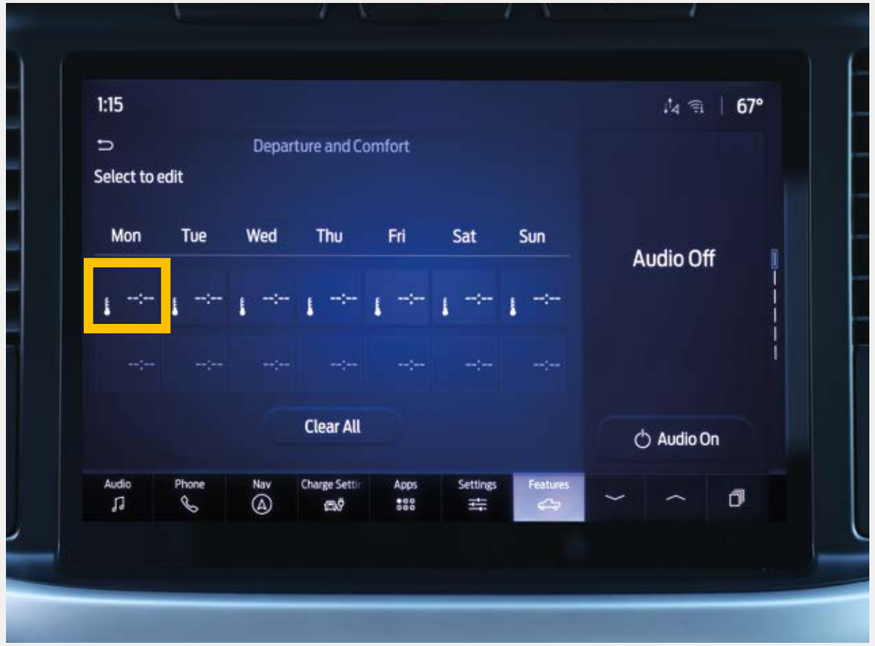

How Do You Schedule Preconditioning?

- If your fleet manager hasn't already scheduled preconditioning for you, you can do it from the vehicle's touchscreen.
- Choose **Features** from the menu at the bottom of the screen, then press the **Departure and Comfort** tile.

Screens shown are subject to change.

How Do You Schedule Preconditioning? (cont.)

- Select a **day of the week** to create a schedule. Select your **departure time**, choose the **day or days of the week**, and select your **cabin temperature preference**.
- Press **Save** to set your departure schedule.
- When your F-150® Lightning® is plugged into a charger, it will prepare the battery and the cabin for your set departure times.

Screens shown are subject to change.

Keep in Mind...

- You can schedule preconditioning for **up to two** different times per day.
- It can take up to **45 minutes** to fully precondition your vehicle.
- You can depart before or after your set departure time – just keep in mind your battery may not get the full benefits of preconditioning.
